Disclaimer

Creating a Seismic Safety Advisory Board: A Guide to Earthquake Risk Management was prepared by the Seismic Safety Commission of California under an agreement with the Federal Emergency Management Agency (FEMA). Its purpose is to assist states, groups of states, local governments, or private-sector entities in developing seismic safety advisory boards. It also contains guidelines for strategic planning and developing a model seismic risk management program to enhance seismic safety once the board is established. However, neither the Seismic Safety Commission nor FEMA can ensure that by using the concepts in this publication, either public- or private-sector entities can avoid bodily injury or property damage when an earthquake occurs. Therefore, neither the Seismic Safety Commission nor FEMA, nor any of their employees makes any warranty, express or implied, nor assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process described herein.
